ABSTRACT

Forty-seven (51.1 percent) of the 92 graduates of the Dental Hygiene program completed a questionnaire designed to provide feed-back information concerning activities of program graduates. Results indicated that: (1) Practically all graduates were employed as Dental Hygienists, with most sharing their time among two or more offices; (2) Daily salary averaged \$75 to \$90 depending upon length of employment and types of services rendered; (3) About half the graduates received a variety of fringe benefits, the most common being dental services; (4) Number of patients seen per day ranged from four to twenty, averaging about ten; (5) Most graduates participated in continuing education courses following their graduation, but many of these courses were brief one-day or conference type endeavors; (6) Most were employed only in general dental hygiene work--about 10 percent also worked in periodontic and pododontic areas, with one each working in orthodontic, geriatric, and oral surgery clinic areas; (7) Over 90 percent performed the tasks of scaling-root planing, polishing, and plaque control--over 80 percent sharpened instruments, made bite-wins, radiographs, or performed ultra-sonic scaling; (8) Most felt competent in the three tasks performed by over 90 percent of them--they felt least competent in certain types of X-ray work and curettage. "FOLLOW-UP STUDY OF DENTAL HYGIENE GRADUATES, 1971-74"

PURPOSE OF THE STUDY

This study was undertaken at the request of Marilyn Bushman, Director of the L.A.C.C. Dental Hygiene Program, to provide feedback information concerning activities of program graduates.

PROCEDURE OF THE STUDY

Four classes (1971, 1972, 1973, 1974) have graduated from the L.A.C.C. Dental Hygiene program. Each graduate was sent a questionnaire devised by the Dental Hygiene Department. 47 of the 92 graduates returned completed questionnaires, and at this point Ms. Bushman requested that the Research Office analyze the completed instruments and answer with available response data a series of questions she formulated. This study attempts to comply with that request.

FINDINGS

The following tables summarize the completed questionnaires as closely as possible with the request from Ms. Bushman.

TABLE 1 - Total Number of Respondents to Dental Hygiene Questionnaire Sent to Graduates for the Years of 1971, 1972, 1973, and 1974

Year of Graduation	No. of Graduates	No. of Respondents	%
1971	22	7	31.8
1972	23	13	56.5
1973	23	12	52.2
1974	24	15	62.5
Totals	92	47	51.1

TABLE 2 - Number of Dental Hygiene Graduates Employed in Fall, 1974

Year of Graduation from L.A.C.C.

	1971		1972		1973		1974		TOTAL	
	No.	%	No.	%	No.	%	No.	%	No.	%
Number of graduates responding	7	(14.9)	13	(27.7)	12	(25.6)	15	(31.9)	47	(100.0)
Number of graduates employed in Fall, 1974	6	(85.7)	12	(92.3)	12	(100.0)	14	(93.3)	44	(93.7)

SUMMARY AND CONCLUSIONS

This study summarizes responses to a questionnaire sent to graduates of the Dental Hygiene program. All graduates of the program since its inception were included. 92 questionnaires were sent with 47 (51%) responding. The following observations are based on the responses of these 47 graduates:

- (1) Practically all graduates are employed as Dental Hygienists, with most sharing their time among two or more offices.
- (2) Although the form of the data reported makes precise figures difficult to determine, it appears that daily salary averages from about \$75 to \$90 depending upon length of employment and types of services rendered. For those who work on commission, about two thirds of the fees charged are retained by the Hygienist.
- (3) About half of the graduates indicated they earned fringe benefits of a variety of kinds, the most common being dental services.
- (4) Number of patients seen per day ranged from four to twenty, depending upon type of service, averaging about ten.
- (5) Most graduates indicated they had participated in continuing education courses following their graduation, although it appears that many of these courses are brief one-day or conference type endeavors.
- (6) Most graduates indicated they were employed only in general dental hygiene work; about 10% indicated they also worked in periodontic and pedodontic areas, with one each working in orthodontic, geriatric and oral surgery clinic areas.
- (7) Graduates indicated over thirty different functions performed in their work. Over 90% indicated they performed the tasks of scaling-root planing, polishing and plaque control; over 80% indicated they sharpened instruments, gave fluoride treatments, made bite-wing radiographs, or performed ultrasonic scaling.
- (8) Respondents indicated they felt most competent in the three area performed by over 90% of them; they felt least competent in certain types of X-ray work and curettage.

September 1974

Dear Dental Hygiene Graduate:

In order to evaluate the Los Angeles City College Dental Hygiene Curriculum and plan for the future role of dental hygiene in California, would you please assist me by completing the enclosed survey. Please return it to me at Los Angeles City College, as soon as possible.

The Dental Hygiene Department has lost contact with many of you as you marry and also change addresses. Would you please keep us informed by sending us your name change and address.

Your co-operation is greatly appreciated.

Sincerely,

Marilyn J. Bushman, RDH, MS

Survey of LACC Dental Hygiene Graduates

1. Year of graduation from LACC dental hygiene. _____
2. Are you presently employed as a hygienist? _____
3. If you are not employed in dental hygiene, please explain why not. _____
4. For each practice in which you have been employed, please fill in the requested information. For functions performed, fill in the number of the function on the attached list.
